SUMMARY

Junior Software Developer with practical experience building full-stack web applications, primarily focused on Java, Spring Boot, and React, with additional proficiency in Python and FastAPI. Skilled in designing RESTful APIs, implementing secure authentication, and applying clean code principles. Motivated to continuously improve my software engineering skills and contribute to building reliable, scalable applications within a professional development team.

EDUCATION

Poznań University of Economics and Business *2025 – Exp. 2027*

M.Sc. in Computer Science and Econometrics | *Spec: IT in Business and Administration*

Poznań University of Economics and Business *2022 – 2025*

B.Sc. in Computer Science and Econometrics | *Spec: Electronic Business*

- **Rector's Scholarship — Top 5% of students for academic excellence.**

SKILLS

Backend: Java, Spring Boot 3, Spring Security (JWT), Spring Data JPA, Hibernate, JUnit, REST API, Python, FastAPI

Frontend: JavaScript, React, HTML5, CSS3, Tailwind CSS

Databases: PostgreSQL, MySQL, SQLite, MongoDB, SQL

Tools & DevOps: Git, Github, Docker, Maven, Postman, Swagger/OpenAPI, CI/CD (basics)

AI/LLM: AI-assisted development (GitHub Copilot), Prompt engineering, RAG concepts

PROJECTS

Social Media Platform | *Java, Spring Boot, PostgreSQL, React, Docker* GitHub →

- Built a layered CMS backend supporting CRUD operations for posts, drafts, and comments, with clear separation between business logic and data persistence.
- Designed and enforced Role-Based Access Control (RBAC) using Spring Security, restricting administrative operations such as category and tag management to authorized users only.
- Implemented multipart file upload handling to support image attachments, managing storage and retrieval as part of the content workflow.

Banking Application (Team Project) | *Python, FastAPI, SQLite, React, Tailwind CSS* GitHub →

- Collaborated in a 5-person team to design and develop a digital banking application, dividing responsibilities across key functional areas and establishing clear ownership of implemented features to support parallel development.
- Implemented core banking workflows including internal and external transfers, transaction history management, saved recipients, loan applications, and account statement export through RESTful API endpoints.
- Developed backend services using FastAPI with Pydantic-based data validation and PyTest unit tests, ensuring correctness of core financial operations.

Movie Platform | *Java, Spring Boot, PostgreSQL, React, Docker* GitHub →

- Designed and implemented a RESTful API enabling movie discovery and personal watchlist management, allowing users to search for movies, view details, and manage their saved titles.
- Integrated TMDB API to retrieve and process real-time movie metadata, transforming external responses into application-specific models and synchronizing selected data with the database.
- Secured private endpoints using stateless JWT-based authentication, maintaining separation between public movie browsing and user-specific features such as watchlist management and reviews.

LANGUAGES

Polish (Native), English (B2/C1), German (A2)

EXTRA-CURRICULAR ACTIVITIES

- **Advanced OOP in Java Course:** Specialized course organized by SKN PSI in collaboration with PSI Polska.
- **SKN Data Science:** Workshops on data analysis, statistical modeling, and Python programming.

I hereby consent to my personal data being processed for the purpose of current and future recruitment processes, in accordance with the General Data Protection Regulation (GDPR).
